UCLPartners

UCLPartners Proactive Care Frameworks: Transforming CVD Prevention

Digital tools

Digital Resources to Support The Implementation of UCLPartners Proactive Care Frameworks

- The purpose of this document is to provide an overview of digital resources that support implementation of the [Proactive Care Frameworks](#). This is intended to be a resource for guidance and information on validated resources available, as well as providers of digital technology to support patient care.

- UCLPartners has developed a list of patient-facing digital tools to enable remote monitoring and self-management for long-term conditions. The following is intended to provide guidance on technology available that can be commissioned, to support remote monitoring and enhanced, self-directed management for patients with Long term conditions.

- All digital tools considered meet the following criteria:

  - Market ready for purchase & supply.

  - UK supplier, already operational in the NHS.

  - Evidence available, demonstrating patient and clinician impact and improvement.

  - Regulatory requirements may vary according to product and use and therefore have been stated in the guidance document where relevant

  - Budget impact evaluation available, demonstrating better value/ reduced long-term costs to the system.

  - Is accessible – e.g. health inequalities considered/ meets minimum accessibility requirements.

Disclaimer – We do not endorse or recommend any of the commercial products, processes or services provided within this document, with the sole intended purpose to be for guidance only.

The technologies and companies included are neither preferred nor sole providers, and procurement or purchase of these would be conducted in accordance with the relevant procurement law obligations, using frameworks relevant to the requirements of the respective contract and/or tender.

If you are a supplier and would like to be included on the list please contact commercialteam@uclpartners.com

Name	Description
Abtrace	A proactive monitoring tool, utilising NLP to maximise patient outcomes such as QOF and DES
Accurx	Digital desktop applications incorporating text messaging and Floreys to support remote care of patients
Ardens	A clinical decision support and workflow optimisation solution
CareIQ	A health analytics platform, simplifying chronic care for clinicians
CEG (available in London only)	Software tools to improve clinical management and recording. Build data-driven tools that help GPs improve the health of their patients
Consultant Connect	Immediate advice & guidance for primary care clinicians to be connected with specialists for advice in real time, via phone or messaging
E-consult	All-in-one online consultation platform to collect robust patient information, support triage, manage demand and ensure patients are seen by the right person at the right time.
Eclipse	A medication risk stratification tool, empowers surgeries to meet CQC, QOF, IIF PCN frameworks whilst improving patient safety
Doctrin	Care navigation platform, triaging patients to appropriate clinician and supporting workforce optimisation
Patient Chase	Automates all aspects of patient recall, enabling a practice to identify patients, communicate with them and code all the contact made with them.
Penguin	PROMs tool to support patient initiated follow-up
Primary care IT	Advanced optimisation of clinical systems (EMIS Web and SystmOne) to enhance care and streamline processes.
PS. Health.ltd/ Florence	Florence is managed by admin and clinicians via powerful, intelligent and secure software platform, clinically validated protocols, and extensive analytics.
Soar Beyond Ltd	Service redesign and pathway implementation services SMART workforce competency assessment and capability mapping tool. I2i Network digital training and implementation resources for clinical pharmacists in general practice workforce
Suvera	UK's first virtual clinician provider specialising in tech driven long term condition management, designed for you and patients, to relieve pressure and increase revenue

Abbreviations: Natural Language Processing (NLP), Quality and Outcome Framework (QOF), Directed Enhanced Service (DES), Patient Reported Outcome Measures (PROMs), Care Quality Commission (CQC), Investment and Impact Fund (IIF), Primary Care Network (PCN)
